Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 16-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Derbyshire et al (US 2002/0044050).

Regarding claims 1-5, 7 and 16, 17 and 19-25 Derbyshire et al teaches a tire pressure sensor 9 10 for automobile vehicle wheels (abstract) and a microprocessor 6 19 for pressure measurement and for control of a radio transmission circuit 5, the sensor 9 10 having a module for activating the microprocessor 6 19 associated with an activation control timer 100 26, characterized in that wherein the timer 26 100 is programmable [0018] and means are provided for programming it [0119]; a processing circuit 6 19 configured to receive signals from the tire pressure sensor 9 10 and

output data based on the tire pressure 9 10 , the processing circuit having a periodic operation 26 100; wherein a period of the periodic operation of the processing circuit is variable and comprises a predetermined finite period of time which can be interrupted by occurrence of a predetermined event causing the processing circuit to operate [0119][0122-0123].

Allowable Subject Matter

2. Claims 6 and 18 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The cited prior art does not disclose nor suggest wherein a period of the periodic operation of the processing circuit is variable and comprises a predetermined finite period of time which can be interrupted by occurrence of a predetermined event causing the processing circuit to operate and the processing circuit is configured to be controlled to operate at a first rate when a temperature is at a first value and is configured to be controlled to operate at second rate slower than the first rate when the temperature is at a second value higher than the first value.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US documents 2006/0180647, 2003/0102966, 2002/0044050, 7076999, 6619110, 6684691, 6545599, 6271748 all teach tire monitoring devices containing microprocessors and timer devices.
